

-- READ IT TO THE VERY END TO GET THE
FULL IDEA --

The song *Rail On* by **Papa Wemba** has to be one of the finest song, or atleast that's how I see it. As It's about looking at life from outside your own perspective.

And before I continue, I must say that I just found myself crawling outside a hole I never knew I was in (Sep '24), or as Avicii says it (Or whoever exactly wrote the lyrics):

*"All this time I was finding myself, and I
Didn't know I was lost"* - **Wake me up**

And now back to the narrative, (And Yeah, I just talked about ***Rhumba and Swedish House*** together in less than three paragraphs :| , so this is prolly gonna

contain deep questions that require deep thoughts (Very deep) [Linking them back to their true cradle {The two types of music mentioned <Referring to the evolution of man, Linking Swedish House, a more modern form of music back to Africa via Rhumba>}]

"Kama ni maisha yako fuata" - Rail On

By Papa Wemba deeply shows how much we consider fitting in to the bigger picture or world to the point where simply choosing to be different from the rest gives you either a higher or lower position than the "normal" society

Normal: What can be considered truly normal in a world that most likely exists simply by chance? A universe full of

different mostly unconscious (Any entity that has a pattern that it creates and controls is considered conscious in this context. E.g. Solar Systems, Galaxies) elements and most likely just by chance came what to be considered Life.

Life: A new born child that would soon be able to study and understand itself (Think of the DNA but in the **next decillion years from now**) born from an unconscious entity.

That's why I think Life is indeed Sacred, Cause It was slowly formed from different complex combinations of the unconscious universe, a beautiful and unlikely product of the mixing in the universe's wild and harsh environment, that's actually

intelligent. Ever thought of it that way?
Every Gadget that we consider Perfect
(Today's Normal) (Most inventions),
resulted as a result of Life itself trying to
manipulate the very building blocks that
gave birth to it (Think of the Bigger Picture)

Do you think that we're just in the
beginning of a History of what in the very
far (Beyond "Infinity" as we know or
calculate it today in the 21st Century) say
in the "Googolplex Age" will be considered
as the conscious universe? Just as a child
grows and starts to understand the world
around them, Or how Life started from a
single cell then spread out to the entire
globe. Have you ever thought of that
similar concept of *life* as we know it and
understand it today (First Edition Written in
The Anthropocene Age
[18-09-2024-2200+hrs]) now applied to the

Universe in General. (The Evolution of the universe)

Imagine our Universe As being the "Single cell" of what will be referred by the scientists of the Age of the "Fully Conscious Universe" to as the first **microbe**? Take some time and think of that.

The only existing reference of what I personally pictured and what I'm trying to explain with this Narrative is ***Alien X***.

*Image source: [https://
ben10.fandom.com/wiki/
Alien_X_(Classic)], Credit: Cartoon
Network*

Now with Alien X as the hypothetical result of the final evolution of the Universe in mind, Keep an Open Mind and Allow me to explain my thoughts on the universe, I'll also explain why I think this idea could possibly be true (If the mentioned assumptions are true),

Take the current Universe as we currently know it (13.7 billion years old) and try and picture it as a single building block eg: A biological "cell" Whether it's Flat or Spherical (Referring The Shape of the universe) feel free to use any of the following analogies (Flat - The main shape of Cells / Computer Pixels [General Shape

if it was placed on a flat ground]) or Spherical [The smallest unit in the representation of 3D Computer Graphics (From how I remember it)])

With Life (The Mind Specifically) on Planet Earth being one of the most unique results of the universe known to Mankind at the moment, Think of life as the Nucleus or part of it of the Final Universe

As time goes by, life becomes more complex and spreads out through the never ending free space (Analogy: The "Cell" begins to split and spread) and Evolution occurs on a Universal Scale

In case you're struggling to grasp the above concept, then try asking yourself if Microbes ever thought that they would evolve and turn into Today's Life with its

complexity and Intelligent abilities.

*Now think of that similar concept but on a
Universal Scale*

What if we humans are simply the first part of the evolution of the Conscious Universe that Can Actually Document its history [What if in the future, the Internet achieves the status of *The Sumerian archaic cuneiform script and the Egyptian hieroglyphs*]

--END OF ANALOGIES (ABOVE)--

Now, to avoid indirectly repeating myself with the analogies I have come up with to try and explain the idea, lemme try and Explain why I think this might be true.

Numbers and Number Systems

Numbers tell us alot about the universe and without them, the world of science would never exist and we therefore never have understood most of the concepts we currently understand and have proof of. The root element of the complexity of life is the number.

Why you may ask? Because we define complexity as "the state or quality of being intricate or complicated" (Directly Copied from Google) and things only become complicated if there are too many uncertainties or unknowns (notice the words *too many* and how they inevitably point back to numbers)

At the moment, the human mind has its

limits. One of them being the fact that we can't really comprehend Infinity at the moment And This is where I think *Number Systems* come in place)

Assuming there really is an end to numbers, I think Infinity simply (possibly) refers to the next "Filter", maybe in the future, With the advanced technologies of the Future Universal Civilisations, They'll have come up with new number Systems that will be able to go beyond the limits of the current number system, including surpassing the Decimal & Hexadecimal number Systems.

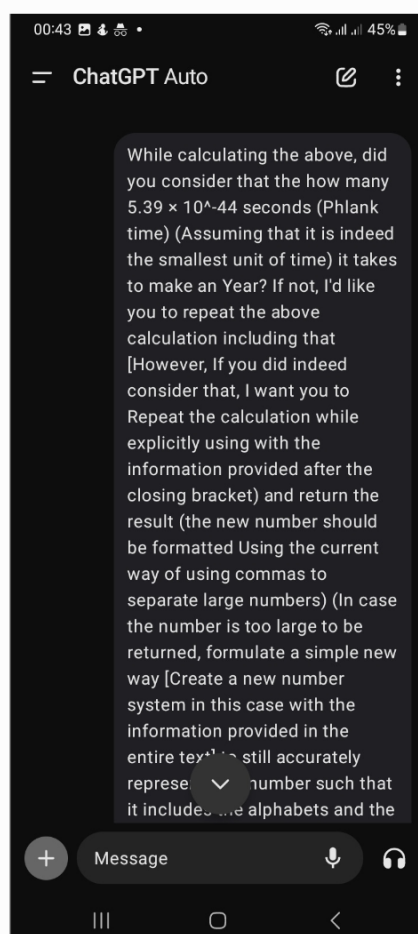

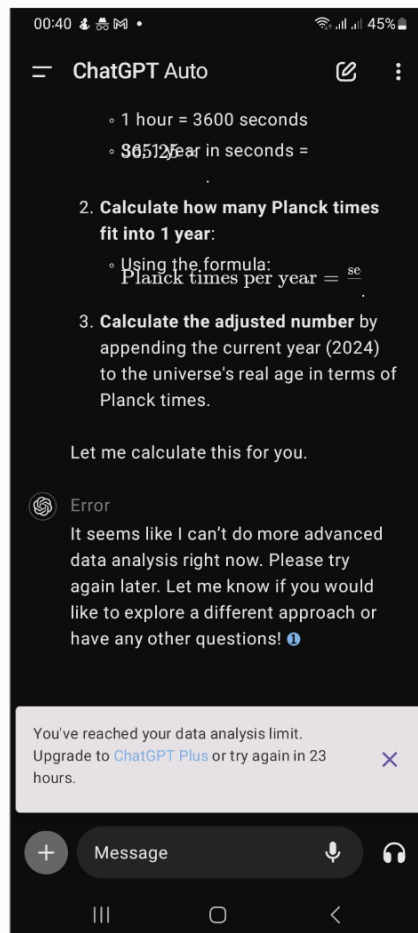

It seems to make sense that we could possibly either be the first form of life In this vast universe (Possibly Explaining why we haven't found Extra Terrestrial Life) or we are simply have limited knowledge.

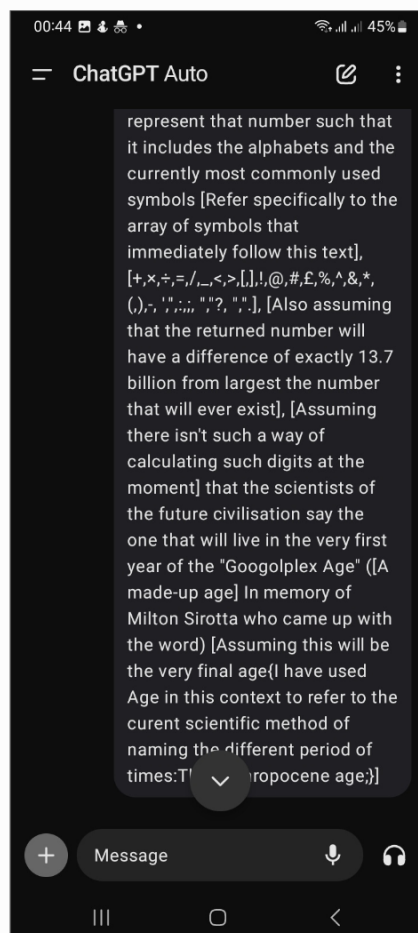

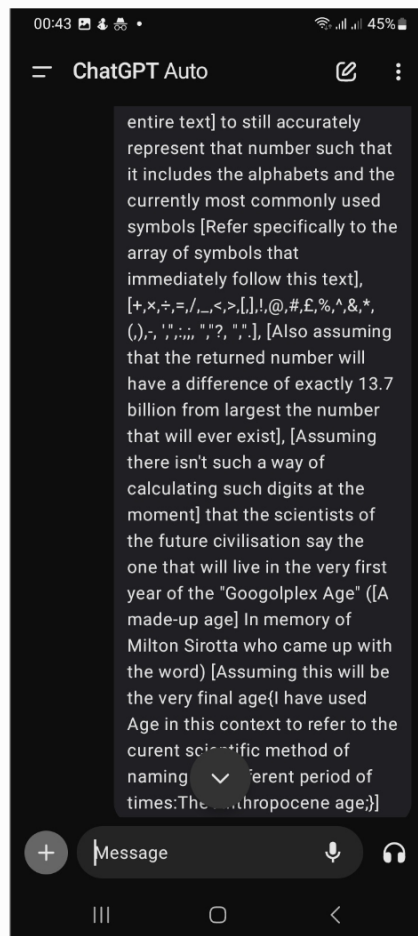

[Written / Composed by Dan .L. Muncha - A stoned teen (19) with an obsession of seeking to unlock the mysteries of the Universe through science]

~DanDoesWeirdPoetry

*(--Something interesting happened while I tried to calculate the exact age it will be for the final evolution of the universe (If Entropy does hold true in the end) from a super futuristic point of view (An age where the current number system is obsolete and depreciated and Googolplexllion years old), and that is, I **broke ChatGPT** [By simply trying to teach it how to think beyond the normal way of thinking] [Refer to the Screenshots attached below] {And Now I Fully understand why AI is currently considered as Narrow AI, I also think that I might have grasped for some few minutes, how we*

could turn AGI from an idea and into a reality before I lost it}--)

(--Something else interesting that happened While writing this narrative is that I realised [Specifically within 19-09-2024-0000:0100hrs] while racking my brain while trying to fully understand the entire concept of the universe is that some of my Early childhood memories ([Or "lost memories" if they're not really from my Early Childhood] [The memories {Audio memories} were triggered by the music I was listening to while writing and researching this narrative using AI (ChatGPT specifically) {The Genre Rhumba specifically} Refer to the Spotify Listening History of [my_spotify_id] from 18-09-2024 to 19-09-2024)
